

DISCUSSION OF ROLLS AND SMITH-THOMPSON

Ricardo Reis
LSE

Rethinking Macroeconomics
London, 2nd of October, 2018

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives
5. Never ignore markets and equilibrium

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives
5. Never ignore markets and equilibrium
6. Hate block boxes

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives
5. Never ignore markets and equilibrium
6. Hate block boxes
7. Much (too much?) prefer counterfactuals to forecasts

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives
5. Never ignore markets and equilibrium
6. Hate block boxes
7. Much (too much?) prefer counterfactuals to forecasts
8. Sensitive to data mining and to out of sample predictions (macro)

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives
5. Never ignore markets and equilibrium
6. Hate block boxes
7. Much (too much?) prefer counterfactuals to forecasts
8. Sensitive to data mining and to out of sample predictions (macro)
9. Very worried (too worried?) about the Lucas critique

Persuading economists

1. Economics is large and diverse, but obsess over opportunity costs
2. It takes a model to beat a model
3. Economists are very (too much?) pragmatic and applied
4. Never ignore incentives
5. Never ignore markets and equilibrium
6. Hate block boxes
7. Much (too much?) prefer counterfactuals to forecasts
8. Sensitive to data mining and to out of sample predictions (macro)
9. Very worried (too worried?) about the Lucas critique
10. Like round numbers
